

Complete AI Prompt for a Fully Customizable Portfolio Website

Create a modern, professional, high-performance personal portfolio website that can be hosted on GitHub Pages. The entire website must be fully customizable through an Admin Dashboard or CMS-style configuration system without modifying any source code.

Main Goal

The portfolio owner should be able to update every section of the website at any time through a visual interface or configuration panel.

No coding knowledge should be required to update content.

The website should be designed for software developers, university students, freelancers, designers, and IT professionals.

Technical Requirements

Hosting

- Compatible with GitHub Pages
- Static site generation preferred
- SEO optimized
- Fast loading speed
- Mobile responsive
- Progressive Web App (PWA) support
- Dark and Light mode
- Accessibility compliant

Data Management

All content should be editable through:

- Admin Dashboard OR
- JSON Configuration Files OR
- Git-based CMS

No source code editing should be required.

All updates should instantly reflect on the website after publishing.

Global Website Settings

Create a settings panel containing:

Personal Information

- Full Name
- Professional Title
- Profile Picture
- Cover Image
- Short Bio
- Detailed Biography
- Location
- Timezone
- Current Status
